Credit Portfolio Governance and Analytics Framework

A management system that connects portfolio oversight, predictive analytics and credit strategy

STRATEGIC OPERATING MODEL

Victor Quinzo , MBA

01 GOVERN

PORTFOLIO GOVERNANCE

Own the policy, limits and risk tolerance that govern portfolio decisions

CREDIT POLICY
Corporate rules, underwriting standards and portfolio actions

EXPOSURE LIMITS
Buyer and segment caps that control portfolio concentration

RISK TOLERANCE
Thresholds that trigger review, escalation and action

02 MONITOR

PORTFOLIO MONITORING AND EARLY WARNING

Track overall portfolio health, detect emerging risk and focus management attention

- **Portfolio Risk Scoring** — Credit Quality Ratings, Overall Portfolio Assessments
- **Delinquency and migration** — Roll rates and vintage trends
- **Exposure and utilization** — Limit usage and loss exposure
- **Concentration and macro** — Industry, region and external risk

03 ANALYZE

01 **PRODUCT TAXONOMY**
Build a taxonomy framework for product/region or cluster segmentation

02 **DIAGNOSE**
Leverage SQL, Tableau Prep or Power Query to find where risk is changing and identify the concentrations, drivers

03 **POD (DELINQUENCY)**
Use SQL and Python to score obtain probability of delinquencies unseen accounts

04 **ESTIMATE LOSS**
Apply PD × LGD × EAD, roll rates and stress tests

05 **EXECUTE STRATEGY**
Translate results into portfolio action

04 ACT

- **Adjust credit policy**
- **Adjust exposure limits**
- **Refine risk tolerance and review cadence**
- **Deliver executive recommendations**

ENABLERS

Validated data | Risk methodologies | **SQL, Python and BI** | Process and controls | Cross-functional partnership

BUSINESS IMPACT

Healthy portfolio | Controlled risk | Profitable growth | Executive confidence
